

Hello {company} Team,

My interest with {company} originates with the high standards and mission-oriented environment set forth by the organization. I share that ethos and want to play a role in disseminating the products and solutions that have long held {company}'s success. I'd like to start doing so as a Software Engineer at {company}.

In my opportunity at The Ken Blanchard Companies, I immediately excelled in a fast-paced environment. I thrived in high-intensity workflows, delivering superior quality work under tight deadlines. Presently as a Software Engineer at 100Devs, I have completed an array of full stack applications encompassing design, coding and testing – culminating that work into documentation and implementation. Most recently, I developed “Baseball Pitch Guesser” – a full stack application which provides users a range of live baseball games upon which to guess pitch type and location. This app ingests data from an API on a pitch-by-pitch basis displaying where the user's selection matches up with live gameplay. It is a fully responsive and modern design built using HTML, CSS, JavaScript, Express as a framework for Node.js, EJS as the templating language and MongoDB serving the database.

My focused, passionate and astute drive make me a perfectly capable candidate for Software Engineer in the {company}'s development team. I am ecstatic with the opportunity to function for the users and customers of {company}. I look forward to hearing back from you soon.

Best Regards,

Kyle Mettling
